

# MYTH

Standards stifle innovation

# FACT

CCSDS stimulates advanced technology by adopting, adapting, developing, and solidifying innovations with exposure to a wider community.

# MYTH

Standards delay implementation

# FACT

Not if the innovation is brought into the standards process early. Delays result from reluctance to standardize, not from standardization.

# STANDARDS. LOWER COST LOWER RISK INCREASE CAPABILIT

When an innovative technology is rapidly brought to the standards community, it is vetted with a larger user base, hence facilitating the widespread adoption of innovative technology.

# as of May 2012:

CCSDS currently has 69 active standards and practices

571 spaceflight missions have used various CCSDS standards

CCSDS was formed in 1982 by the major space agencies of the world to provide a forum for solving common problems in the development and operations of space data systems. It has developed Recommended Standards and Recommended Practices for data and communications systems to:

- a) Promote interoperability and cross support among cooperating space agencies to reduce operations costs by sharing facilities
- Reduce the cost to the various agencies of performing common data functions,
   by eliminating unjustified project-unique design and development

Currently membership includes:

- 11 Member Agencies
- 28 Observer Agencies
- 145 Commercial Associates

CCSDS also functions as an ISO Standards Committee, Technical Committee 20 Subcommittee 13 (TC20-SC13), Space Data and Information Transfer Systems. In this capacity, CCSDS/ISO-TC20-SC13 represents 20 nations.

# **AGENCIES**

#### MEMBER AGENCIES

ASI/Italy CNES/France CNSA/China CSA/Canada DLR/Germany ESA/Europe FSA/Russia INPE/Brazil JAXA/Japan NASA/USA UKSA/UK

#### OBSERVER AGENCIES

ASA/Austria
BFSPO/Belgium
CAS/China
CAST/China
CITC/China
CSIR/South Africa
CSIRO/Australia
DCTA/Brazil
DNSC/Denmark

TsNIIMash/Russia

TUBITAK/Turkey USGS/USA

# www.ccsds.org

On the CCSDS website our published standards are downloadable **for free.** 

#### PUBLICATIONS AS OF MAY 2012

- 50 Recommended Standards
   Blue Books normative and directly implementable for interoperability
- 19 Recommended Practices
   Magenta Books normative, but not directly implementable, such as architectures, practices, etc.
- 44 Informational Reports
   Green Books overviews, ops concepts, foundations for standards
- And other documents Experimental, procedural, etc.

#### REVIEW DOCUMENTS

CCSDS conducts open, cross-organizational reviews, coordinated through space agency representatives for each nation. From the CCSDS website, anyone (agency, industry, academia, etc.) with a solid technical background can represent their organization's needs and contribute to CCSDS document reviews.

# OTHER FEATURES ON WWW.CCSDS.ORG

#### NEW WORK ITEMS ANNOUNCEMENTS

This is where CCSDS announces new initiatives, so technical experts can see what exciting new technology work is being developed for standardization in CCSDS, and join the CCSDS team to help forge the future. These include new working groups, new document projects, new "Birds of a Feather" groups, etc.

#### THE CCSDS BLOG

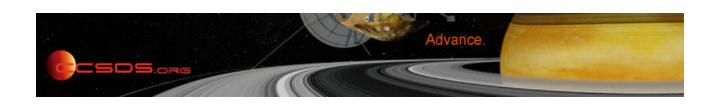

This is for general announcements of CCSDS activity, such as new document reviews and meeting announcements.

### THE COLLABORATIVE WORK ENVIRONMENT

**BLOG** 

This is the SharePoint work area where the real work gets done. Public visitors can view the working group structures, contact info, and material that is made public by the working groups. If you're interested in joining a CCSDS working group, this is the place to start.

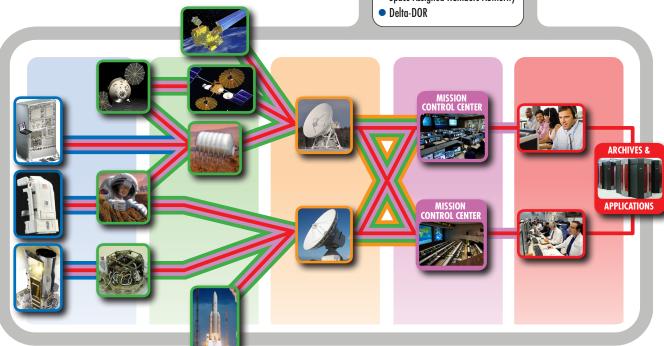

### CCSDS ARCHITECTURAL OVERVIEW

This Architectural Overview shows the Areas and Working Groups (topics) that are currently, as of May 2012, developing new standards in CCSDS.

- Security
- Space Assigned Numbers Authority

#### Spacecraft Onboard Interface Services

- Onboard Wireless WG
- Application Support Services (including Plug-and-Play)

#### **Space Link Services**

- RF & Modulation
- Space Link Coding and Syncrinization
- Multi/Hyper Data Compression
- Space Link Protocols
- Next Generation Uplink
- Space Data Link Security
- Planetary Communications
- Optical Coding and Modification

#### **Cross Support Services**

- Cross Support Service Management
- Cross Support Transfer Services
- Cross Support Architecture

### Space Internetworking Services

- Asynch Messaging
- IP-over-CCSDS Links
- Motion Imagery and Applications
- Delay Tolerant Networking
- Voice
- CFDP over Encap

#### Mission Operations and Information Management Services

- Navigation
- Spacecraft Monitor and Control
- Data Archive Ingestion
- Digital Repository Audit/Certification
- Telerobotics

#### Six Technical Areas

Twenty-seven working bodies:

- Working Group (producing standards)
- Birds of a Feather stage (pre-approval)
   Special Interest Group (integration forum)

# THE SIX TECHNICAL AREAS DEVELOPING NEW STANDARDS IN CCSDS

#### SYSTEMS ENGINEERING (SE)

The SE area supports the work of CCSDS by providing overall architecture for space mission communications, operations, and cross-support; coordination and collaboration with the other areas about architectural choices and options; and evaluation of consistency of all area programs of work with the defined architecture.

# SPACECRAFT ONBOARD INTERFACE SERVICES (SOIS)

The primary objective of the CCSDS SOIS area is to improve the spacecraft flight segment data systems design and development process by defining generic services that will simplify the way flight software interacts with flight hardware and permit interoperability and reusability for the benefit of agencies as well as industrial contractors.

#### SPACE LINK SERVICES (SLS)

The SLS area develops efficient space link communications systems common to all participating agencies. A space link interconnects a spacecraft with its ground support system or with another spacecraft. New generations of space missions require telecommand and telemetry capabilities beyond current technologies. These new needs are for higher data rates, better link performances, and higher performing ranging systems. SLS area concentrates on radio frequency (RF) and modulation, channel coding, and data link layer - for both long-haul (e.g., spacecraft to ground) and proximity links (e.g., orbiter to lander). Two additional SLS functions are data compression for end-to-end data transfer optimization and ranging for accurate orbit determination

#### **CROSS SUPPORT SERVICES (CSS)**

The CSS area addresses how space network resources are made available by one organization to another for the purpose of "Cross Support." The objective of the CSS area is therefore to define what services are required at various cross-support interface points, and how those services are exposed, scheduled, and used by organizations that want to confederate their infrastructure in order to execute a mission.

# SPACE INTERNETWORKING SERVICES (SIS)

The SIS area provides services and protocols to address networked interactions of many forms: between spacecraft and earth-based resources, among spacecraft, between spacecraft and landed elements, and within heterogeneous spacecraft. The SIS area deals with communication services and protocols that are independent of specific link technology (as a lower layer bound) and independent of application-specific semantics (as an upper bound). This covers essentially the network through application layers of the OSI reference model. The SIS area accommodates all ranges of delay, interactivity, and directionality, although not all protocols are appropriate for all environments.

# MISSION OPERATIONS AND INFORMATION MANAGEMENT SERVICES (MOIMS)

The objective of the MOIMS area is to address all of the flight execution phase applications that are required to operate the spacecraft and its ground system in response to mission objectives and their associated detailed information management standards and processes. The focus of this area is primarily on the "mission operations" functions that occur on a timescale driven by the flight path of the space vehicle. The MOIMS area ensures that application standards exist that facilitate the smooth transition of space mission information between the "mission operations" systems and the "mission utilization" systems.

#### CCSDS BLUE BOOKS

As of May 2012, CCSDS has 50 active CCSDS Blue Book publications. These are Recommended Standards that can be implemented and immediately demonstrate interoperability.

CCSDS 121.0-B-1 Issue 1 | May 1997 Lossless Data Compression CCSDS 122.0-B-1 Issue 1 | November 2005 Image Data Compression CCSDS 131.0-B-2 Issue 2 | August 2011 TM Synchronization and Channel Coding Issue 1 | March 2012 Flexible Advanced Coding and Modulation Scheme for High Rate Telemetry Applications CCSDS 132 0-B-1 Issue 1 | September 2003 TM Space Data Link Protocol CCSDS 133.0-B-1 Issue 1 | September 2003 Space Packet Protocol CCSDS 133.1-B-2 Issue 2 | October 2009 **Encapsulation Service** CCSDS 135.0-B-4 Issue 4 | October 2009 Space Link Identifiers CCSDS 211.0-B-4 Issue 4 | July 2006 Proximity-1 Space Link Protocol — Data Link Layer CCSDS 211.1-B-3 Issue 3 | March 2006 Proximity-1 Space Link Protocol — Physical Layer CCSDS 211.2-B-1 Issue 1 | April 2003 Proximity-1 Space Link Protocol — Coding and Synchronization Sublayer CCSDS 231.0-B-2 Issue 2 | September 2010 TC Synchronization and Channel Coding CCSDS 232.0-B-2 Issue 2 | September 2010 TC Space Data Link Protocol CCSDS 232.1-B-2 Issue 2 | September 2010 Communications Operation Procedure-1 CCSDS 301.0-B-4 Issue 4 | November 2010 Time Code Formats Issue 5 | September 2007 CCSDS 320.0-B-5 CCSDS Global Spacecraft Identification Field Code Assignment Control Procedures CCSDS 401.0-B-21 Issue 21 | July 2011 Radio Frequency and Modulation Systems — Part 1: Earth Stations and Spacecraft CCSDS 414.1-B-1 Issue 1 | March 2009 Pseudo-Noise (PN) Ranging Systems CCSDS 415.1-B-1 Issue 1 | September 2011 Data Transmission and PN Ranging for 2 GHz CDMA Link via Data Relay Satellite CCSDS 502.0-B-2 Issue 2 | November 2009 **Orbit Data Messages** CCSDS 503.0-B-1 Issue 1 | November 2007 Tracking Data Message CCSDS 504.0-B-1 Issue 1 | May 2008 Attitude Data Messages CCSDS 505.0-B-1 Issue 1 | December 2010 XML Specification for Navigation Data Messages CCSDS 521.0-B-1 Issue 1 | October 2010 Mission Operations Message Abstraction Layer CCSDS 620.0-B-2 Issue 2 | May 1992 Standard Formatted Data Units — Structure and Construction Rules

CCSDS Blue Books are required to be proven prior to publication by at least two independently developed prototypes that demonstrate interoperability.

CCSDS 910.4-B-2 Cross Support Reference Model — Part 1: Space Link Extens	Issue 2   October 2005 ion Services
CCSDS 911.1-B-3 Space Link Extension — Return All Frames Service Specificat	Issue 3   January 2010 tion
CCSDS 911.2-B-2 Space Link Extension — Return Channel Frames Service Spe	Issue 2   January 2010 cification
CCSDS 911.5-B-2 Space Link Extension — Return Operational Control Fields So	Issue 2   January 2010 ervice Specification
CCSDS 912.1-B-3 Space Link Extension — Forward CLTU Service Specification	Issue 3   July 2010
CCSDS 912.3-B-2 Space Link Extension — Forward Space Packet Service Speci	Issue 2   July 2010 ification
CCSDS 913.1-B-1 Space Link Extension — Internet Protocol for Transfer Servic	Issue 1   September 2008 ces

#### CCSDS MAGENTA BOOKS

As of May 2012, CCSDS has 19 active CCSDS Magenta Book publications. These set forth Recommended Practices.

CCSDS 131.4-M-1 TM Channel Coding Profiles	Issue 1   July 2011
CCSDS 311.0-M-1 Reference Architecture for Space Data Systems	Issue 1   September 2008
CCSDS 506.0-M-1 Delta-Differential One Way Ranging (Delta-DOR) Operation	Issue 1   April 2011
CCSDS 520.1-M-1 Mission Operations Reference Model	Issue   July 2010
CCSDS 651.0-M-1 Producer-Archive Interface Methodology Abstract Standard	Issue   May 2004
CCSDS 652.0-M-1 Audit and Certification of Trustworthy Digital Repositories	Issue 1   September 2011
CCSDS 652.1-M-1 Requirements for Bodies Providing Audit and Certification of Repositories	Issue 1   November 2011 If Candidate Trustworthy Digital
CCSDS 851.0-M-1 Spacecraft Onboard Interface Services — Subnetwork Packe	Issue 1   December 2009
CCSDS 852.0-M-1 Spacecraft Onboard Interface Services — Subnetwork Memo	Issue 1   December 2009 ory Access Service
CCSDS 853.0-M-1 Spacecraft Onboard Interface Services — Subnetwork Synch	Issue 1   December 2009
CCSDS 854.0-M-1 Spacecraft Onboard Interface Services — Subnetwork Devic	Issue 1   December 2009 e Discovery Service
CCSDS 855.0-M-1 Spacecraft Onboard Interface Services — Subnetwork Test S	Issue 1   December 2009
CCSDS 872.0-M-1 Spacecraft Onboard Interface Services — Time Access Servic	Issue 1   January 2011
CCSDS 914.0-M-1 Space Link Extension — Application Program Interface for 1 Specification	Issue 1   October 2008 Fransfer Services — Core
CCSDS 915.1-M-1 Space Link Extension — Application Program Interface for I	Issue 1   October 2008 Return All Frames Service
CCSDS 915.2-M-1 Space Link Extension — Application Program Interface for I	Issue 1   October 2008 Return Channel Frames Service
CCSDS 915.5-M-1 Space Link Extension — Application Program Interface for I	Issue 1   October 2008 Return Operational Control Fields
CCSDS 916.1-M-1 Space Link Extension — Application Program Interface for t	Issue 1   October 2008 he Forward CLTU Service
CCSDS 916.3-M-1 Space Link Extension — Application Program Interface for t	Issue 1   October 2008 he Forward Space Packet Service

Normative, and sufficiently detailed (and pretested) that they can be used to implement interoperable systems.

Normative, but at a level that is not implementable for interoperability. Reference architectures, APIs, operational practices, etc.

Not normative. These may be foundational for Blue Books and Magenta Books, describing their applicability, overall architecture, ops concept, etc.

Normative, but may be very new technology that does not yet have consensus of enough agencies to standardize.

Drafts of future Blue Books or Magenta Books that are in agency review.

Procedures, test reports, etc.
