

Germany report on ISO TC20/SC13

New Standards

According to the changes of the ISO TC20/SC13 Program of Work (19.09.06 till 26.01.07) the following status can be given in accordance to the DIN (German Standards Committee):

In the reporting period only the ISO/DIS 22666 (CCSDS 732.0-B-1):

Space data and information transfer systems — AOS (advanced orbiting systems) space data link protocol was asked for voting. The voting is still ongoing. Germany already submitted a positive vote.

Liaisons

Germany supports a strong relationship with SC14 and ECSS to concentrate standardization effort (no duplicate work). For both relationships a clear procedure how to coordinate the work has still to be established.

The same issue is valid for other liaisons.
